

# WHAT TO EXPECT FOR THE FIRST PHYSIOTHERAPY ASSESSMENT

## A FULL MUSCULOSKELETAL ASSESSMENT WILL BE PERFORMED

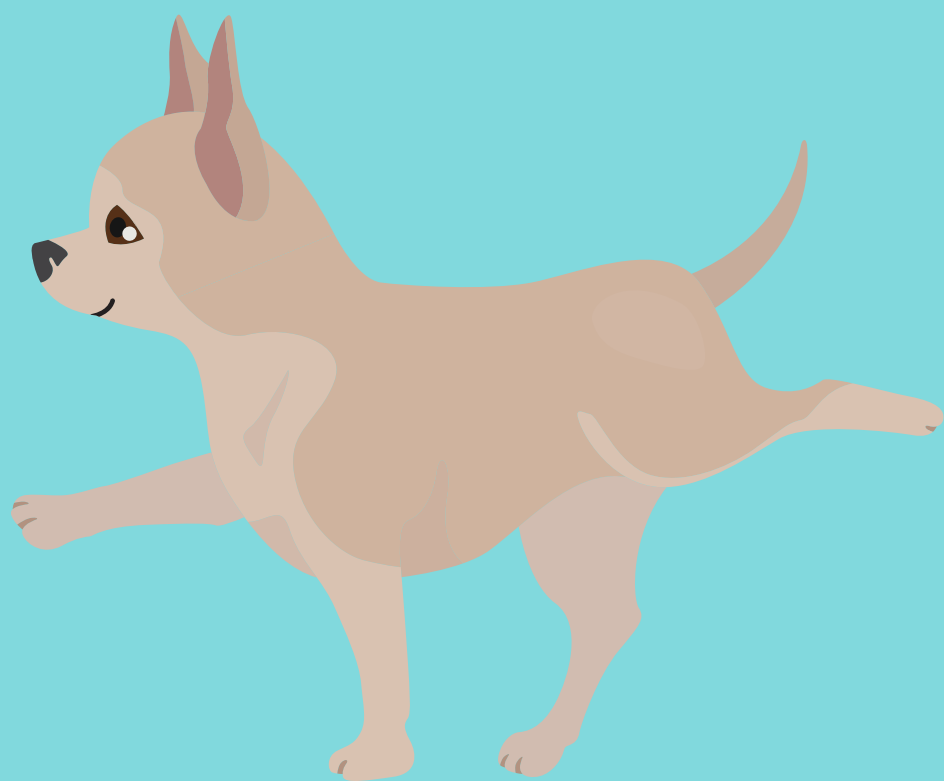

During this we assess your pets':

- Conformation and posture
- How they move
- Muscular condition
- Joint range of motion

## THERAPY

Identified areas of discomfort will be treated through different therapeutic techniques that your therapist deems appropriate for your pets' ailments.

## REHABILITATIVE EXERCISES

The therapist will also incorporate various rehabilitative exercises to target range of motion, proprioception, posture, stability or muscle strengthening/conditioning

## BOOK YOUR NEXT APPOINTMENT AND HOME TIME

After your pet comes out of the treadmill we will wash them down and dry them before they go home. You will also be asked when you would like to book in for your next session. If discussed during the session any additional resources will be sent out to you.
